Mukesh Sahu

Senior Full Stack Engineer | React | Node.js | TypeScript | Golang | Python | AWS | Microservices
+91-8700871285 | mukesh.sahu05mar@gmail.com | LinkedIn | GitHub
New Delhi, India

Summary

Senior Full Stack Engineer with 7+ years of experience designing and building scalable cloud-native applications using React, Node.js, TypeScript, Golang, Python, and AWS.
Experienced in designing cloud-native microservices, developing responsive frontend applications, and building REST/GraphQL APIs serving millions of users.
Skilled in React, Redux, Node.js, Express.js, Golang, FastAPI, MongoDB, PostgreSQL, AWS, Docker, Kubernetes, Terraform, and CI/CD. Passionate about building scalable, secure, and high-performance full-stack applications while mentoring engineering teams.

Experience

Robosoft Technologies Oct 2025 – Jun 2026
Senior Software Engineer

- Contributed to AWS region migration by updating infrastructure, validating application compatibility, coordinating data migration, and ensuring zero-downtime deployments using CI/CD pipelines.
- Built reusable React components, custom hooks, and state management solutions using Redux, improving code maintainability and user experience.
- Improved frontend performance through code splitting, lazy loading, React.memo, useMemo, and useCallback, reducing bundle size and improving Lighthouse metrics.
- Developed reusable component libraries improving UI consistency across multiple applications.
- Integrated secure authentication using JWT/OAuth and role-based authorization.
- Improved Core Web Vitals by optimizing rendering, lazy loading, and image loading.
- Collaborated closely with backend teams to define API contracts and improve frontend-backend integration.
- Integrated REST and GraphQL APIs with React applications, ensuring efficient data fetching and seamless user interactions.
- Developed backend APIs using Node.js, Express.js, and MongoDB to support frontend applications and microservices.
- Participated in code reviews, technical design discussions, and mentoring junior developers to maintain engineering standards.
- Implemented CI/CD pipelines and automated testing strategies, improving release quality and deployment efficiency.
- Worked with AWS services including Lambda, S3, CloudFront, and ECS for cloud-native application deployments.

R Systems Jan 2025 – Oct 2025
Lead Engineer *Remote*

- Designed and implemented AWS infrastructure to support application migration across AWS regions, leveraging Terraform, ECS, Lambda, and S3 while ensuring scalability, high availability, and minimal service disruption.
- Led a team of 4+ backend engineers, driving technical direction and improving delivery efficiency through code reviews and engineering best practices.
- Collaborated with frontend engineers to define API contracts and improve application performance. Designed backend services to support React-based web applications with scalable REST APIs.
- Owned end-to-end delivery of backend services from design to deployment, ensuring performance, scalability, and reliability.
- Collaborated with Product Managers, QA, and DevOps teams to streamline release cycles and ensure smooth deployments.
- Managed multiple repositories using Git, enforcing branching strategies and code review best practices.
- Implemented CI/CD pipelines and Infrastructure as Code (Terraform), improving deployment efficiency and reliability.

- Participated in stakeholder discussions and requirement gathering, translating business needs into technical solutions.
- Provisioned and managed AWS infrastructure (ECS, Lambda, S3), enabling consistent and scalable deployments.
- Interacted with clients and stakeholders to understand requirements and deliver scalable technical solutions.
- Handled multiple backend services and projects simultaneously, ensuring timely delivery and code quality across repositories.
- Built and maintained REST APIs using Node.js and Express.js for scalable backend services.
- Drove backend architecture ownership across multiple services, ensuring scalability, fault tolerance, and maintainability.

DAZN Oct 2023 – Jan 2025

Senior Software Engineer

- Contributed to migrating backend microservices across AWS regions by deploying services on ECS, validating data integrity, optimizing infrastructure, and ensuring high availability with minimal downtime.
- Built two production-grade microservices for data ingestion using SNS and AWS Lambda into DynamoDB.
- Implemented containerized backend services on AWS ECS improving data retrieval performance and service scalability.
- Designed Redis-based caching strategies reducing API latency by 30% and improving performance for high-traffic endpoints.
- Improved observability using Coralogix and PagerDuty alerts.
- Mentored junior developers and conducted code reviews to ensure coding standards and backend best practices.
- Worked closely with frontend teams to optimize API payloads, reducing unnecessary network traffic and improving page load times.
- Designed backend APIs for high-volume React applications handling live sports content.
- Integrated Apache Kafka for asynchronous event streaming to improve data pipeline reliability and scalability.
- Enhanced monitoring and observability using Datadog and Grafana dashboards, improving incident detection and system reliability.
- Implemented structured request validation, centralized error handling, and secure API authentication mechanisms following backend security best practices.
- Investigated production issues and documented incident reports with logs, traces, and debugging details to improve system reliability.
- Collaborated with cross-functional teams to deliver production-grade microservices at scale.
- Contributed to system design discussions and architectural decisions for scalable data pipelines.

SourceFuse July 2022 – Aug 2023

Software Engineer

- Designed and developed scalable serverless microservices and backend APIs using AWS Lambda and API Gateway.
- Integrated AWS services including IoT Core, DynamoDB, SQS, RDS, and EventBridge to build scalable event-driven backend services.
- Optimized DynamoDB batch writes improving throughput by 50%.
- Implemented request validation, structured error handling, and authentication middleware ensuring secure and reliable API operations.
- Designed event-driven architecture leveraging EventBridge and SQS for reliable cross-service communication.
- Designed and executed database schema migrations and performance optimizations ensuring backward compatibility and zero-downtime deployments.

wayForward (Acquired by DarioHealth) June 2019 – July 2022

Software Engineer

- Implemented server-side caching reducing API calls by 40%.
- Optimized scripts to process 15,000+ records in under 5 minutes.
- Introduced Lambda-based indexing improving query performance by 60%.
- Achieved 95% code coverage with unit and integration testing.

Education

B.Tech in Computer Science Engineering 2019
Guru Gobind Singh Indraprastha University

Key Projects

Real-Time Data Streaming & Processing System

- Designed a real-time data pipeline using Apache Kafka, AWS Lambda, and DynamoDB to process asynchronous events with guaranteed delivery semantics.
- Implemented retry strategies, idempotent consumers, and Dead Letter Queues (DLQ) to ensure fault tolerance and resilience.
- Optimized batch writes and indexing strategies improving write throughput by 50% and reducing processing latency.
- Deployed services on AWS ECS with auto-scaling policies to handle traffic spikes efficiently.

High Performance Golang API Service

- Built REST and GraphQL APIs using Golang and Gin framework supporting concurrent request handling and scalable API design.
- Implemented structured validation, error handling, and middleware-based authentication.
- Benchmarked API latency and throughput achieving 35% lower response time compared to equivalent Node.js implementations.

Full Stack SaaS Platform

- Built a production-ready SaaS platform using React, Node.js, Express.js, PostgreSQL, and AWS.
- Implemented authentication using JWT with role-based access control.
- Developed reusable React components with Redux Toolkit and React Router.
- Integrated REST APIs for dashboards, reporting, and user management.
- Containerized applications using Docker and deployed to AWS ECS using CI/CD pipelines.
- Optimized API performance using Redis caching and database indexing, reducing response times by 40%.

Open Source

Open Source & GitHub

- Maintained public repositories demonstrating Golang and Node.js backend architecture patterns, REST API design, and cloud integrations.
- Shared reusable backend utilities, API templates, and developer tooling experiments related to scalable backend systems.
- GitHub: github.com/mukesh86637584

Skills

Languages: JavaScript, TypeScript, Go, Python
Backend: Node.js, Express.js, FastAPI, Gin
Frontend: React.js, React Hooks, Context API, Redux Toolkit, React Router, TanStack Query (React Query), JavaScript (ES6+), HTML5, CSS3, Responsive Design, Material UI, Tailwind CSS
Testing: Jest, Mocha, Chai, React Testing Library
Databases: MongoDB, PostgreSQL, MySQL, DynamoDB, Redis
Cloud: AWS (Lambda, ECS, EC2, S3, CloudFront, API Gateway, SQS, SNS, EventBridge, IAM)
Version Control: Git (branching strategies, PR reviews)
Monitoring: Datadog, Grafana, CloudWatch
Backend & Architecture: REST APIs, GraphQL, API Gateway, JWT, OAuth2, RBAC, Microservices, Event-Driven Architecture, Distributed Systems, System Design, Swagger/OpenAPI
DevOps: Docker, Kubernetes, Terraform, GitHub Actions, CI/CD Pipelines
